

Panel Pools

Dayliff Panel pools are stylish rectangular packaged pools suitable for above ground or in-ground installation. The structure is fabricated from a mix of light 10 & 20mm solid sheets as well as 50mm paneltim polypropylene (PP) sandwich panels that are grey/off-white in colour, welded and bound together to make a strong, leakproof and long-lasting structure. They are supplied completely prefabricated ex-factory for the small widths up to 3m or site assembly for the wider options for simple and quick installation on a light concrete screed base or well compacted hardcore and sand flattened ground in case of the inground options. Features include.

- Available in various sizes with options of widths and depths up to 1.5m
- Standard specification is freeboard configuration with skimmer. Deck level type with peripheral drain channel available as option
- Supplied complete with inlets, suctions and skimmers. Complete circulation unit with reliable pumps and filters as well as lights and accessories including heaters and ladders are available as extras
- Inbuilt steps included as standard with bench arrangement available as an option
- 10 years of leak proof guarantee and ease of repair
- Material is chemically inert saving on chemicals and giving improved control of pool chemistry.

Dayliff Panel Pools are supplied ex-factory for quick delivery that minimises site installation time and inconvenience. They are the ideal solution small capacity pools for residential and hospitality application.
